

LATEX THESIS TEMPLATE

Dr. Mutua Kilai, PhD

May-August 2024

Department of Pure and Applied Sciences

Components of a Research Proposal

The title

- Try to come up with a title that is **unique** and at the same time easy to remember.
- It should also make a **lasting impression** to the reader and make them want to come back and read your proposal.
- The title must also capture the **main concepts of the study**
- As the research process is **lengthy** it is important that you choose a topic that you are so **curious about** that you remain motivated for the duration of the research process.
- Select a topic that you will be able to complete **within the time frame** that you have for your research.

Background of the Study

- The background to the topic of your intended research must be clear and precise. It must not only include an in-depth explanation of the key points of your subject but also all the developments in the field as well as their timelines.
- The researcher must also explain the compelling interest in the research issue as well as the personal interest (if any) in the topic.
- This section must also indicate the specific area within which the topic falls in your particular field of study or subject.
- Also, how will the proposed study contribute to a particular field? In other words, the impact and the significance in a subject area must be clearly outlined. The target audience must also be clearly described.

Statement of the Problem

- State **why**, **how** and **what** you are solving.
- Identify the gap that you are solving.

Objectives

- It is important that the objectives are in alignment with the research questions.
- The objectives must indicate what the aim of the research study is.
- In fact, objectives give you a clear indication of the steps that you will take to achieve the aim of the research.
- The objectives must be specific, measurable, achievable, relevant and time-bound.

Justification

- Give reasons why you feel the research is worth.

Limitations of the Study

- Identify the limitations of the study.

Scope of the study

- Give the scope of the study

Basic Concepts

- Give the basic definitions that you may refer to late.

Research Questions

- If any include them

Literature Review

- Have the following sub-sections:
 - i. Introduction
 - ii. Existing researchers and their gaps
 - iii. Summary and Critique

Methodology

- Outline clearly how you will achieve the objectives.
- This is done part by part.

References

- Done in APA style

Work Plan

- Your schedule for the research must be stated clearly including the projected timelines for the various stages of your study.

Budget

- The budget that you intend to spent on your work

Contents of Title Page

- The contents of this page is per the [outline](#) of the Department of Pure and Applied Sciences.
- I will demonstrate on how to format the document.
- For more details we will explore on the contents section by section.

Packages

```
1 \documentclass[12pt]{report}
